

Developing number sense...

Recognising the number in a group of objects without needing to count up to 5

Playing board games that use dice are great for developing this skill.

What did you see?

I saw a kite!

How did you see it?

I saw a 1 and a 4

We can see numbers in different ways either whole or part.

The infographic features a central yellow and green wavy line. To the left, there are two red dice and a bunch of bananas. Above the line, there are five colorful dinosaurs. To the right, there are five yellow circles and one red circle, with a speech bubble saying 'I saw a kite!'. Below the line, there are two green circles. At the bottom, there are two boxes: one showing a '4' as a 'whole' and '3' and '1' as 'parts', and another showing a stack of four blocks (three purple, one red) as a 'whole' and '1' and '3' as 'parts'.
